Charlotte, NC, Hybrid Remote, Fully Remote

Work Experience

Chapman Auto Detailing *Lead Developer*
This was my first real client. I did a huge amount of data organization, then worked closely with the business owner to design his dream website. I collaborated with a graphic designer as well as SEO professionals to achieve 400+ engagements per month.

Malone *Developer*
Malone is a dog adoption page I created using ReactJS and Tailwind CSS. This was my first experience working with Tailwind and I was very happy with it. This was also my first time using Vite instead of NextJs and although I do not think Vite is a good replacement just yet, I was very impressed with its speed over NextJS.

Forkify *Developer*
Forkify is a fun project I put together after I finished my JavaScript Course. This was my first time using API calls which I used to store login credentials and for recipe uploads and saves. I encourage you to search for different recipes, save your favorites, and even upload some of your own.

Data Dashboard *Developer*
The data dashboard is an app I created to practice ReactJS. I implemented Google's API for user authentication and wanted to push myself, so I learned Material UI for the first time as well. I used this program to display the charts and graphs for data analyses.

Educational History

Web Development *(2022 - Present)*
I have been teaching myself web development for the past two years. I have learned the most common front end programming languages to make myself as useful to my company as possible. I am excelling in this journey and continue to learn every day.

Eckerd College, Bachelor's Degree
Human Development (2014-2018)

Skills

- ReactJS
- TypeScript
- JavaScript
- HTML
- HTML Emails

- SASS
- TailWind
- CSS
- Material UI

- Next.JS
- Vite
- Firebase
- NPM
- Git
- Node

About
I am Kevin Parker, a professional raft guide turned software engineer. Fun fact! I've lived in 14 different places in 28 years including 8 states and 2 countries.

As a front-end web developer, i specialize in ReactJS, JavaScript, TypeScript, and mobile-first design. My code is dynamic, reusable, and well-organized. I have an eye for detail and do not stop until my job is finished.

I am currently accepting job offers for both remote and on-site work. I love to code and I am always excited to work on new projects. Whenever I'm not coding, you can find me mountain biking, whitewater kayaking, and baking. Shoot me an email and let's get your project started!
